 **Chill-Lounge**®

A well - being place between
living space and nature

The **Shill-Lounge**® - The possibility of a sophisticated and flexible room design

Shill-Lounge® - The premium sun room

The premium sun garden Chill lounge closes the gap between the all-year unheated sun garden and the classic living room-conservatory.

The chill-lounge, with its variable opening possibilities, combines with in its construction, the open character of a covered terrace and the charm of a bright clear room with the protection of direct weather influences.

In the roof area, thermally separated Shilling-profiles and suitable fillings such as ISO safety glass or twin-wall sheets are used in common strengths.

The sub-structural elements are made of a high-quality, non-insulated profile systems, which are, however, filled with insulating glazing or other thermally suitable fillings. The elements can be fixed or moveable with the Neher Multiraum parallel sliding system. The increased risk of the formation of condensation as in classical sun gardens is greatly minimized in the Chill Lounge. In the colder months, our Chill Lounge can be temporarily heated, providing a year-round specific use.

System-compatible completion options such as shading, self-cleaning roof glazing, sliding insect protection elements or innovative LED lighting systems are available upon request. Temporary heating elements, double-sided locking capability, as well as additional ventilation elements or fans complement the Chill-Lounge to the perfect place of well-being, such as social gathering with friends.

Schilling roof system with gutter profile and roof rack made of thermally separated profiles.

NEHER Multiraum - Sliding system with ISO-glazing. Frame construction from uninsulated profiles. Easy pushing through high quality Stainless steel rails and special plastic rollers.

Roof rack made of thermally separated profiles.

Sliding system with 3-lanes

Thermally separated grade rack for hipped roof with an optimal glass support.

Wall connection of thermally separated profiles (Illustration shows optional insulation core - red). with ISO-glazing.

Various closing and opening systems with Safety lock.
